 [3] XSLT is most often used to convert data between different XML schemas or to convert XML data into HTML or XHTML documents for web pages, creating a dynamic web page, or into an intermediate XML format that can be converted to PDF documents.. There are also discussions on an XML 2 0, although it remains to be seen, if such will ever come about.. XML 1 1 is not very widely implemented and is recommended for use only by those who need its unique features.. The original document is not changed; rather, a new document is created based on the content of an existing one.. Extensible Stylesheet Language Transformations (XSLT) is an XML-based language used for the transformation of XML documents into other XML or 'human-readable' documents.
